

Sophos Mobile Security

Protect your Android devices against malware and other threats

The market dominance of Android devices and the inherent openness of Android has led to a dramatic increase in mobile malware. SophosLabs has detected over 1 million new pieces of malware in 2014 alone, and the growth rate is accelerating. For attackers, mobile devices are attractive: they are always on, often outside the secure company network, and are typically used for personal means. Malware can lead to data loss, reputation loss, cost spikes, and clogged performance. Sophos Mobile Security can prevent that from happening.

Highlights

- ▶ Protect mobile devices from malicious apps able to steal data or create costs
- ▶ Manage all settings from your Sophos Mobile Control console
- ▶ Protect your devices from malicious websites
- ▶ Protect very important apps
- ▶ Privacy Advisor
- ▶ Security Advisor
- ▶ Loss and Theft

Top security with no drop in performance

The Sophos Mobile Security antivirus app protects your Android devices without compromising performance or battery life. The app uses up-to-the-minute intelligence from SophosLabs and the Sophos core antivirus engine. This means your apps are automatically scanned for malware as you install them.

Your Privacy and Security Advisor

If the device is ever lost or stolen, you can remotely lock or wipe it, shielding your personal information from prying eyes. The Privacy Advisor analyses all installed apps for potential privacy breaches in terms of access to the Internet or your contacts. It also highlights apps that may cause additional costs. The Security Advisor analyses your settings and advises how you can increase your security.

Managed by Sophos Mobile Control (SMC)

Try the free version of our Mobile Security app and protect your personal phone while testing our app without limits. Or you can try our managed version, which is purchased as a part of SMC—our Enterprise Mobility Management (EMM) solution. By putting all your mobile protection in one place, you have full control over the app settings and the execution of your security policies, including web protection.

Protecting your company

Whether a device is company owned or BYOD, Sophos Mobile Security protects the user and protects the company's data. A user is shielded from malware and inappropriate or malicious content. A compromised device is swiftly detected and, depending on your policies, will lead to immediate preventive actions: blocking or removing email, blocking the device, or even wiping the device. Thus, your company's assets remain safe.

What is new in version 5?

- The new version comes with a slick new user interface
- Improvements to the management features
- Includes the latest antivirus engine—deemed the best antivirus engine for three consecutive months by AV-Test

Benefits

- For the CEO and CFO
 - Industry leading protection against loss of data and reputation
 - Includes a budget friendly per-user licensing
 - Web filtering supports company-wide ethics standard
- For the IT-Manager
 - Seamless integration with our EMM
 - Easy deployment
 - Excellent support
 - Robust
 - Guaranteed compliance

- For the Security Officer
 - Security policy is efficiently implemented
 - Supports multiple security profiles
 - Constantly updated malware database
 - Able to set policies on potentially unwanted applications (PUAs)
 - App protection
- For the user
 - Easy to use
 - Keeps interaction to a minimum
 - No interference
 - Practically no battery impact

Supported operating systems

- Android 4.0 and higher

Key features in Sophos Mobile Security

		In Managed mode
Antivirus	On-demand full scan, scheduled scan, scan of every new app, whitelisted apps, include system apps, include SC card, detect PUAs and apps with low reputation, immediate quarantine of malware	Console reports which malware found, whether removed; compromised device triggers immediate compliance action
Loss & Theft	Trigger alarm, locate, lock, unlock, wipe, secure wipe remotely; detect SIM card change	Execute all actions directly from console and track outcome
Security Advisor	Control app sources, USB debugging, screen lock, devices encryption, NFC, Bluetooth	Incorporate any of these settings in your security policy, check progress in reports, and receive warnings on important events
App Protection	Add an extra layer of protection to important apps such as Sophos Mobile Security (to avoid tampering), the settings, Play Store and more; define grace period	Extend your security policy to the app layer, immediately notice violation, define automatic reactions to violations
Web Filtering	Recognize malicious content in websites, categorize all websites, control which categories you consider harmful, define how to respond, define whitelist	Implement your company's code of conduct or adhere to compliance or regulation by controlling harmful categories of content; block, warn, or report
Spam Protection	Block unwanted phone calls and SMS, define unwanted phone callers or types of calls, check for malicious URLs in SMS	
Privacy Advisor	Analyses all apps and warns of incurring costs, privacy violation, access internet	

Get full integration of the Sophos Antivirus Engine in your app. The industry-leading Sophos Antivirus Engine is available as an SDK to provide a maximum layer of security to your corporate apps. Ask our OEM sales for more information.
